Problem-free coupling!

Alpas - the reliable system

Kock & Sohn have produced the „Alpas“ system for more than 30 years . „Alpas“ distinguishes itself through flexibility and high durability for tractors with a performance of up to 118 kW (160 PS). A quick 1-man-installation is warranted by the all-position-ring and its compact construction which avoids any loose parts.

An economical solution

Alpas twin wheels and grid wheels are clamped to the tractor wheel by cranking and using only one spindle. According to power and wheel seize of the tractor three, five or seven levers grip to the all-position-ring and the attachments. The wheel is centered automatically and immovably positioned.

All-Position-Ring (APR)

type
attachment

Advantages of Alpas locks with All-Position-Ring (APR) or attachment

- Alpas APR-twin wheels fit in any position
- Extremely quick installation with only one spindle
- Quick installation and dismantling provides increased mobility
- Compact construction
- Duplication of the wheel contact area is possible
- Minimum soil pressure through optimum tire pressure
- No loose hooks and eyes
- 1-man - installation

Our ALPAS twin rims are painted in silver. Other colours are possible upon request.
